

GLOVE SIZE

It can be difficult to determine what glove size that will fit your hands. If you are in doubt, then try measuring the circumference of your hand and use our glove guide above to determine what size your gloves have to be to fit your hands.

Simply, take a measuring tape and wrap it around your dominant hand just below the knuckles. Measure in centimeters. When you got the measurement, compare it to the size guide above. If your hand measures between two sizes, then always choose the larger size. For instance, if your hand has a circumference of 26 cm, then choose a size XL.
