

HOW TO CALCULATE YOUR FOOT SIZE

Put on the type of socks you usually wear with your shoes and measure your feet in the afternoon (feet usually swell over the course of the day). Stand on a hard surface and place a sheet of white paper under your foot. Distribute your weight evenly. Measure from the edge of the paper under the heel to the longest part of the foot, which may or may not be the big toe. Use a ruler to measure the marked length in centimetres.
